a second networking device coupled to the cable, the second networking device automatically identifying from the cable the first networking protocol and then switching to driving itself into the first networking protocol.

4. (Previously Amended) A system comprising:
a first networking device operating in a first networking protocol;
a cable coupled to the first networking device;
a second networking device coupled to the cable, the second networking device automatically identifying from the cable the first networking protocol and driving itself into the first networking protocol; and

wherein the cable has a connector at each end, the connector having a plurality of unused contacts, and wherein the second networking device has a power supply coupled through a resistor to at least one unused contact when the cable is coupled to the second device.

5. (Original) The system of claim 4 wherein the second networking device comprises:

a network interface module that identifies the cable protocol.

6. (Previously Amended) The system of claim 7 wherein the detector signals a software switch which selects a first set of configuration data to configure the device in a first protocol if the voltage is at the predetermined level and selects a second set of configuration data to configure the device in a second protocol if the voltage is not at the predetermined level.

7. (Original) The system of claim 4 wherein the second networking device comprises:

a detector to identify if a voltage at the cable side of the resistor is at a predetermined level.

[8. (Canceled).
